To whom it may concern,

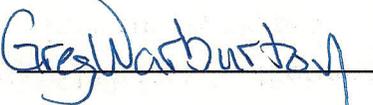

As we have learned of the proposed bridge crossing for Utah Lake, it has created an excitement for us as a business. The bridge would help us, as a local business, in so many ways. The west end of our Happy Valley is missing one huge thing, and that is a productive route of travel out to the quickest growing portion of the valley.

We are a residential home builder based in Pleasant Grove. We have been operating here in the valley to 37 years now. It's been frustrating to watch as the county has grown, but we haven't grown our road structure system to enable the full potential of growth in the west end of the county. This bridge proposal will allow the west end to better meet its full capacity. As a business, it would save us a considerable amount of time and money to have a more serviceable system in place.

It only makes sense to give both ends of the county to opportunity to do the best that each possibly can. This bridge across the lake will do just that. It will provide a simple, cost efficient means for the western half of the county to blossom. Furthermore, the bridge provides us, as business men here on the east side of the county a more economical program to serve our customers.

As a business we have also done everything in our power to create a better green environment for the world we leave behind. We do our best to recycle any possible materials we can. This bridge would obviously help reduce fuel usage to the residents of all the new communities across the lake, thus helping the emissions being released into the air. As the current situation is with the road structure through Lehi, the amount of time sitting at stop lights and vehicle congestion has to rank poorly. We support this venture and look forward to the day when west and east can better service one another.

Sincerely,

Owner
